

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (currently amended) A method ~~Method~~—for communicating structured information, between a first user and at least one second user, said method comprising:

defining a document standard determining a general framework of the document comprised of:

a series of titles and notifications; and

values authorized by fields of information, the step of defining being performed by said first user and the second user, said first user producing the information, the second user receiving at least a portion of the information;

inputting, by said first user, said information, the step of inputting being comprised of inputting text and/or titles to the general framework and selecting values authorized on said fields;

transmitting said information from said first user to storage for each secondary user;

selecting, by each secondary user, a sorting criterion based on the titles or the fields of the document set by the step of defining a document standard;

re-organizing the document according to said sorting criterion; and

supplying, to the secondary user, the document re-organized according to said sorting criterion;

wherein each second user defines an identical document standard, and wherein each second user selects a separate sorting criterion corresponding to each second user independent from another second user.

2. (currently amended) The method ~~Method~~ according to claim 1, wherein said titles and notifications and the inputted text and titles appear as single linear text in at least one text zone, during the step of inputting and the step of supplying.

3. (currently amended) The method ~~Method~~ according to Claim 1, wherein the step of defining said document standard comprises:

modifying at least one title by said first user during the step of inputting; and

selecting the modified title by the second user during the step for selecting said sorting criterion.

4. (currently amended) The method ~~Method~~ according to Claim 1, wherein the step of inputting comprises:

modifying at least one part of said document standard after the step of defining by said first user.

5. (currently amended) The method ~~Method~~ according to Claim 1, wherein the step for defining said document standard further comprises:

defining categories of information by said first user and the second user, said sorting criterion being based on said categories of information by the second user.

6. (currently amended) Method according to Claim 1, wherein the step of inputting is further comprised of:

associating a priority level with the information, and wherein the step of selecting is comprised of selecting a hierarchy of information based on said priority level of the information.

7. (currently amended) The method ~~Method~~ according to Claim 1, wherein the step of transmitting comprises:

forming the information according to an accessible page format over an information network, readable using a web navigator and printable from any office work station equipped with a web navigator and a printer.

8. (currently amended) The method ~~Method~~ according to Claim 1, further comprising:

consolidating documents, wherein information of the documents linked to identical titles are juxtaposed under a unique title for different documents.

9. (currently amended) The method ~~Method~~ according to Claim 1, said method further comprising:

determining a summary of the document, the information being selected as a function of a hierarchy of information values.

10. (currently amended) The method ~~Method~~ according to Claim 1, wherein the step of inputting comprises:

allocating an identification of an author of the information, and

wherein the step of selecting comprises:

selecting a hierarchy of information values based on identification of said author.

11. (currently amended) The method ~~Method~~ according to Claim 1, wherein the document contains all titles and information input by said first user during the step of supplying.

12. (currently amended) A device ~~Device~~ for communicating structured information between a first user and at least one second user, said device comprising:

a computer programmed with software comprising:

means for semantically defining a document standard, being suitable for determining a general framework of the document comprised of:

a series of titles and notifications; and

values authorized by fields of information;

means for inputting by a first terminal from said first user, information to be provided by inputting text and/or titles to the general framework and by selecting values authorized on said fields;

means for transmitting the information from said first user terminal to storage for access by each second terminal of each second user;

means for selecting, by each secondary user terminal of the second user, a sorting criterion based on the titles or fields of the document;

means for re-organization of the document according to said sorting criterion set by the means for selecting; and

means for supplying, to each second terminal, the document being reorganized according to each sorting criterion and containing all titles of the document and the information input by said first user,

wherein the means for defining said document standard is determined by said first user and each second user, said document standard being identical for said first user and each second user, each second user having a separate sorting criterion corresponding to each second user independent from another second user.

13. (new) The method according to Claim 1, wherein the second user modifies the content of the document to give it added value.
